Importance: High

Dear Mr Jones

It has come to my attention that the above side roads order objection period has expired, but Dwr Cymru may not have made representations with regard to the proposals.

Please see the attached plans and please note the disclaimer on the plans. Dwr Cymru has apparatus affected by the proposals. The proposals may also affect our access to Llanddewi Velfrey waste water treatment works, but as the plans that have been provided are very faint we are unable to fully assess the impact. We will require clearer plans in order to assess whether the access to the waste water treatment site will be affected and the actual impact on our apparatus.

The following apparatus appears to be affected:

- 110mm HPPE water main;
- 150mm HPPE water mains;
- 160mm PROFUSE PE water main;
- 6" CONC foul sewer;
- 150mm VC foul sewer;
- 90mm PROFUSE PE water main.

In order to assess the effect on our apparatus please can you provide full details of the proposed works including the depth and location of any excavations.

We require confirmation as to whether the proposals will impact our access to the waste water treatment works.

We also need to understand if our access to our apparatus will remain unfettered and whether the applicant will apply and pay for any necessary diversions. I believe that this may be already under review under the NRSWA C4 process, but would be grateful if you could please confirm if that is the case.

We must object to the proposals as they would impact our statutory duty and this would have public health implications. Considering that the proposals may have such an impact please can you confirm whether you will take this statutory objection into consideration?

Yours sincerely

Natasha Long
